314 Mich.App. 111

Court of Appeals of Michigan.

In re YARBROUGH MINORS.

Docket Nos. 326170, 326171.

Submitted Dec. 8, 2015, at Detroit.

Decided Jan. 19, 2016, at 9:00 a.m.

Synopsis

Background: Department of Human Services filed a petition alleging that one or both parents physically abused their five-month-old son. Parents sought funds for consultation with a medical expert regarding alternate causes for son's injuries. The Wayne Circuit Court denied request and, after a hearing, the Circuit Court, [Karen Y. Braxton, J.](#), terminated both parents' parental rights. Parents appealed.

Holdings: The Court of Appeals, [Gleicher, J.](#), held that:

[1] parents had due process right to funds for consultation with medical expert regarding alternate causes for child's injuries, and

[2] trial court abused its discretion by failing to employ the requisite due process analysis under *Mathews v. Eldridge*.

Vacated and remanded.

[Jansen, P.J.](#), filed concurring opinion.

West Headnotes (7)

[1] Infants

Costs and Fees

Neither criminal statute providing judge with the authority to appoint an expert witness at public expense, nor civil statute permitting a court to appoint and compensate an expert witness to assist the court, was applicable so as to authorize

court to grant parents funds for consultation with a medical expert regarding alternate causes for child's injuries in termination of parental rights action. *M.C.L.A. § 775.15*; *Mich. R. Evid. 706*.

[2] Appeal and Error

 Constitutional Rights, Civil Rights, and Discrimination in General

Infants

 Trial or review de novo

Appellate courts review de novo questions of constitutional law, including whether a child protective proceeding complied with a parent's right to due process. *U.S.C.A. Const.Amend. 14*.

[3] Constitutional Law

 Protection of Children; Child Abuse, Neglect, and Dependency

Because child protective proceedings implicate an interest far more precious than any property right, to satisfy constitutional due process standards, the state must provide the parents with fundamentally fair procedures. *U.S.C.A. Const.Amend. 14*.

[3 Cases that cite this headnote](#)

[4] Constitutional Law

 Protection of Children; Child Abuse, Neglect, and Dependency

Fulfillment of parent's due process rights in child protective proceeding may sometimes require state-funded access to an expert to assist in the evaluation, preparation, and presentation of a defense. *U.S.C.A. Const.Amend. 14*.

[1 Cases that cite this headnote](#)

[5] Constitutional Law

 Removal or termination of parental rights

Infants

 Costs and Fees

In deciding whether trial court abused its discretion, in termination of parental rights

action, by denying parents' request for funds for consultation with a medical expert regarding alternate causes for child's injuries, appellate court would follow *Mathews v. Eldridge* due process analysis and examine the private and governmental interests at stake, the extent to which the procedures otherwise available to parents served their interests, and the burden on the state of providing expert funding. U.S.C.A. Const.Amend. 14.

[6] Constitutional Law

🔑 Removal or termination of parental rights

Infants

🔑 Costs and Fees

Parents had due process right to funds for consultation with medical expert regarding alternate causes for child's injuries, in termination of parental rights action; parents' interest in accuracy and justice of a decision was a commanding one, medical evidence conflicted concerning whether child sustained trauma to his brain before his respiratory arrest, lack of expert guidance prevented parents' counsel from interpreting CT scan or the MRI, or understanding whether additional specific laboratory tests should have been ordered, availability of cross-examination, uninformed by expert consultation, did not adequately reduce the risk of error, and \$2,500 that parents sought was not unreasonable. U.S.C.A. Const.Amend. 14.

[7] Constitutional Law

🔑 Removal or termination of parental rights

Infants

🔑 Rehearing and new trial

Infants

🔑 Costs and Fees

Trial court abused its discretion by failing to employ the requisite due process analysis under *Mathews v. Eldridge*, requiring court to examine the private and governmental interests at stake, the extent to which the procedures otherwise available to parents served their interests, and the burden on the state of providing expert

funding, when determining if parents were entitled to funds for consultation with medical expert regarding alternate causes for child's injuries in termination of parental rights action, and abridgment of parents' due process rights required a new termination hearing, if parents elected to request one after they had been afforded a reasonable fee for expert consultation. U.S.C.A. Const.Amend. 14.

Opinion

GLEICHER, J.

*114 The Department of Human Services filed a petition alleging that one or both respondents-parents physically abused their five-month-old son, JPY. Respondents denied hurting their child and sought funds for consultation with a medical expert regarding alternate causes for his injuries. The circuit court rejected their request, ruling that respondents had not established a reasonable probability that an expert would assist their defense. The issue presented is whether this decision denied respondents due process of law.

We conclude that the circuit court applied an incorrect standard for determining respondents' entitlement to expert assistance funding. Because a parent's interest in the accuracy of a decision to terminate his or her parental rights is "commanding,"  *Lassiter v. Dep't of Social Servs. of Durham Co., North Carolina*, 452 U.S. 18, 27, 101 S.Ct. 2153, 68 L.Ed.2d 640 (1981), the proper inquiry weighs

the interests at stake under the due process framework established in [Mathews v. Eldridge](#), 424 U.S. 319, 335, 96 S.Ct. 893, 47 L.Ed.2d 18 (1976). Application of the *Eldridge* factors necessitated affording respondents with reasonable funds for expert consultation. We vacate the order terminating respondents' parental rights and remand for further proceedings.

****880 I**

Respondents are the parents of JPY and a three-and-a-half-year-old daughter. On June 11, 2014, ***115** mother noticed that JPY's left eye appeared to deviate and had a "red dot" in it. Mother took the child to his pediatrician, who performed an examination and ordered an MRI. The order recited, "[B]aby not moving his left eye, please evaluate for mass or space occupying lesion or reason for [abducens] nerve dysfunction." Mother brought JPY directly to St. John Hospital for the procedure. The child was assessed in the St. John Hospital Emergency Room that afternoon, and no abnormalities were noted other than a "crossed eye." According to St. John Hospital, the MRI, performed with and without contrast, revealed a normal, uninjured brain:

There is nothing to indicate an abnormal fluid collection, space-occupying mass, focal signal abnormality, or focal enhancing lesion. There is no mass or abnormal signal involving the brainstem, and no space-occupying process within the prepontine or interpeduncular cisterns, nor suprasellar or cavernous sinus regions, on this MRI of the entire brain. No restricted diffusion is demonstrated. The ventricles, basal cisterns, and sulci over the convexities are within normal limits. The midline structures are within normal limits. The myelination pattern is within normal limits.

Mother and JPY left St. John at 7:00 p.m. Mother was instructed to watch JPY "carefully for breathing issues" and to return to the emergency department if any were noted.¹

***116** Mother noted that JPY felt a little warm that evening, but he took a bottle and fell asleep. The next day, June 12, JPY continued to seem warm, acted "fussy," and took only four ounces of formula. Father arrived in the late afternoon to care for the children so mother could get something to eat.² Within 5 to 10 minutes of mother's departure, father saw "milky" "bubbles" coming from JPY's nose and mouth as the child lay on his back on a bed. JPY took three breaths and slumped "like a rubber doll." Father called 911 and requested an ambulance. The dispatcher instructed him how to perform CPR while awaiting the emergency personnel. Mother returned shortly after JPY's collapse and took over CPR. When eight or nine minutes had elapsed with no sign of an ambulance, respondents drove to St. John Hospital as mother continued CPR in the car.

On arrival at the hospital, JPY was flaccid, unconscious, and had no pulse. He took only intermittent gasping breaths. After prolonged resuscitation, JPY developed a pulse. A physician noted that the infant's estimated "downtime" was approximately 30 minutes, and that the child had been ill with [upper respiratory infection](#) ****881** symptoms during the preceding week.³ A [CT scan](#) of JPY's brain obtained that evening revealed no acute findings and did not suggest a traumatic injury:

There is no evidence of acute [intracranial hemorrhage](#). The ventricular system is not dilated. Motion artifact is noted obscuring the left posterior parietal region.

***117** No masses or focal fluid collections are noted. Gray-white matter differentiation is grossly well-maintained given limits of low-dose technique. No sulcal effacement or evidence of mass effect.

The orbits and paranasal sinuses are normal in appearance. The calvarium and overlying soft tissues are unremarkable.

The working diagnosis at St. John was that the child had suffered a prolonged [cardiorespiratory arrest](#). He remained comatose.

A St. John social worker performed an evaluation and found no evidence to suspect child abuse. She noted in relevant part:

Both parents and maternal grandmother exhibit appropriate

concern for the patient. All 3 were tearful and disheartened by the entire event. The consultation for abuse and neglect does not, in the opinion of this worker, appear to be valid and social work sees no evidence of any maltreatment. This worker also spoke with the medical staff, who are in agreement that abuse or neglect does not appear to be the case for this family.

Late the next evening, St. John transferred JPY to Children's Hospital of Michigan for continuing intensive care. The physicians at Children's Hospital reviewed the MRI and the CT scan performed at St. John and concluded that both demonstrated significant abnormalities, in contrast to the entirely normal findings reported by the radiologists at St. John, who interpreted the same images. A Children's Hospital radiologist concluded that the St. John MRI revealed an “[i]nfra and supratentorial bilateral subdural hematoma” suggestive of prior trauma, and that the CT scan reflected the same subdural hematoma, as well as widening of the sutures and a “[r]ight parietal healing fracture with soft tissue swelling over the parietal *118 convexity.” A Children's Hospital ophthalmologist examined JPY and reported that the child had bilateral retinal hemorrhages. Physicians at Children's Hospital concluded that JPY was “a severely injured baby with subdural hemorrhages, bilateral retinal hemorrhages, skull fracture from abusive trauma.” Petitioner filed a permanent custody petition on June 18, 2014.⁴ The court authorized the petition on June 30, 2014.

On September 22, 2014, mother filed a motion “for appointment of expert witness.” The motion set forth the child's medical history and the conflicting diagnoses, asserting:

In order to adequately rebut the anticipated expert opinion testimony presented by the State, Respondent must be able to retain and call her own expert to review the evidence of medical staff and to present an opinion (i.e., that the type of injuries to the child is not necessarily indicative of

abuse by the parent; that there may be other explanations for the injury than abuse), particularly since the Mother adamantly denies any abuse or nonaccidental injury occurred.

****882** The motion stated that mother was without funds to hire an expert, and it urged, “[i]n the interests of fairness, Respondent should be provided the same opportunity as the State to consult with a medical expert and call said expert to the stand to offer an opinion concerning causation of the injury.”⁵

Father filed a concurring pleading. He averred that he could obtain a fair and impartial trial “only through *119 the use of an independent, impartial expert ... [;] the medical records and condition of this child are so involved and so difficult as to render [father's] counsel unable to appropriately cross [-]exam[ine] the expert witnesses which will be provided and presented by the Attorney General's Office.”

The family division judge declined to hear respondents' motions, as a Wayne County Local Administrative Order permits only the chief judge to authorize payment of extraordinary fees in family division cases. During oral argument before the chief judge, mother's counsel outlined the medical circumstances of the case and requested funds for “an independent expert.” Counsel estimated that “up to [\$]2,500” would be needed. Father's lawyer stressed, “We simply do not have the medical skills to be able to properly cross-examine the medical experts from Children's Hospital in a manner in which will provide the Court with sufficient information to reach an independent and informed conclusion.” In response to the chief judge's suggestion that counsel arrange to speak to the treating physicians at both hospitals, without payment, mother's counsel stated, “[W]e would certainly prefer an independent expert” due to the implicit criticism of the St. John radiologic diagnoses by the Children's Hospital child abuse unit physicians. “[I]n order to be fair to the parents and the parties in this case ... and to level the playing field,” counsel insisted, respondents were entitled to their own expert.

The chief judge denied the respondents' funding requests, relying on  *People v. Tanner*, 469 Mich. 437, 443–444, 671 N.W.2d 728 (2003), and  *People v. Leonard*, 224 Mich.App. 569, 582–584, 569 N.W.2d 663 (1997). The court

opined that the lawyers needed to learn “how to review medical records” on their own, and *120 that a request for assistance in going through the records was insufficient to support funding for an expert. “You also have to demonstrate that it would be fundamentally unfair if I didn't appoint an expert,” the court continued, “and you haven't demonstrated that to me.”

The termination hearing commenced on December 8, 2014. Dr. Conrad Giles, a Children's Hospital ophthalmologist, testified that JPY had [retinal hemorrhages](#) apparent in all four quadrants of both eyes, consistent with “a [Shaken Baby Syndrome](#).” According to Dr. Giles, JPY had been shaken on “multiple” occasions well before June 14, 2014. Dr. Giles denied that any cause other than severe trauma could explain the hemorrhages, although he admitted that he had not reviewed the St. John records and lacked awareness of anything that had occurred before JPY's arrival at Children's Hospital, including JPY's respiratory and [cardiac arrests](#). Dr. Deniz Altinok, a pediatric neuroradiologist, testified that JPY's St. John MRI revealed a [subdural hematoma](#) and that the [CT scan](#) showed evidence of prior [head trauma](#). In Dr. Altinok's view, JPY had been severely shaken and his head subjected to an impact. Additional x-rays obtained **883 at Children's Hospital demonstrated rib, leg, and [vertebral fractures](#). Dr. Altinok opined that the fractures resulted from deliberately inflicted trauma. Two additional physicians from Children's Hospital expressed expert opinions that JPY was the victim of severe abuse.

Mother and father denied causing JPY's injuries and offered no explanation for their etiologies. Mother called as a witness Dr. Beata Ruprecht, a St. John Hospital pediatric neurologist who had participated in JPY's evaluation and care. The court prevented *121 Dr. Ruprecht from offering any opinions concerning the St. John MRI, finding her unqualified to do so.⁶

The court terminated respondents' parental rights under [MCL 712A.19b\(3\)\(b\)\(i\)](#), [\(b\)\(ii\)](#), [\(g\)](#), [\(j\)](#), [\(k\)\(iii\)](#), [\(k\)\(iv\)](#), and [\(k\)\(v\)](#), and found that termination of parental rights served the children's best interests. Both parents now appeal, contending that the chief judge abused his discretion by denying their requests for expert witness funding.

II

[1] [2] In a criminal case, [MCL 775.15](#) provides a judge with the authority to appoint an expert witness at public expense. [Tanner](#), 469 Mich. at 438, 671 N.W.2d 728. Appellate courts review such decisions for an abuse of discretion. [People v. Carnicom](#), 272 Mich.App. 614, 616, 727 N.W.2d 399 (2006). As this is a civil matter, [MCL 775.15](#) does not apply. [MRE 706](#), which permits a court to appoint and compensate an expert witness to assist the court, is likewise inapplicable; counsel sought an expert witness who would consult with and assist respondents, not the court.⁷ On appeal, respondent-father has linked his request for funding to respondents' constitutional right to due process of law. We review de novo questions *122 of constitutional law, including whether a child protective proceeding complied with a respondent's right to due process. [In re Williams](#), 286 Mich.App. 253, 271, 779 N.W.2d 286 (2009).

III

[3] Parents possess a fundamental interest in the companionship, custody, care, and management of their children, an element of liberty protected by the due process provisions in the federal and state Constitutions. [U.S. Const. Am. XIV](#); 1963 [Const. art. 1, § 17](#). Because child protective proceedings implicate “an interest far more precious than any property right,” [Santosky v. Kramer](#), 455 U.S. 745, 758–759, 102 S.Ct. 1388, 71 L.Ed.2d 599 (1982), “to satisfy constitutional due process standards, the state must provide the parents with fundamentally fair procedures.” [Hunter v. Hunter](#), 484 Mich. 247, 257, 771 N.W.2d 694 (2009) (quotation marks and citation omitted).

Here, we consider whether the termination proceedings were fundamentally fair despite respondents' inability to retain expert consultation. Our analysis of **884 this question draws on a series of cases addressing the “age-old problem” of “[p]roviding equal justice for poor and rich, weak and powerful alike.” [Griffin v. Illinois](#), 351 U.S. 12, 16, 76 S.Ct. 585, 100 L.Ed. 891 (1956). We find one such case, [MLB v. SLJ](#), 519 U.S. 102, 117 S.Ct. 555, 136 L.Ed.2d 473 (1996), particularly instructive. In [MLB](#), the United States Supreme Court held that the state of Mississippi could not constitutionally require indigent parents appealing the termination of their parental rights to pay record and transcript preparation fees. [Id.](#) at 127–128, 117 S.Ct. 555. In reaching

this decision, the Supreme Court majority dubbed *Griffin* “the foundation case.” [Id.](#) at 110, 117 S.Ct. 555.

*123 *Griffin* struck down a rule that conditioned appeals of criminal convictions on an indigent defendant's procurement of trial transcripts that he or she could not afford. *Id.* Although the *MLB* dissenters argued against extending *Griffin* to civil cases involving the termination of parental rights, the *MLB* majority rejected that argument for reasons that resound here:

[W]e have repeatedly noticed what sets parental status termination decrees apart from mine run civil actions, even from other domestic relations matters such as divorce, paternity, and child custody. To recapitulate, termination decrees work a unique kind of deprivation. In contrast to matters modifiable at the parties' will or based on changed circumstances, termination adjudications involve the awesome authority of the State to destroy permanently all legal recognition of the parental relationship. Our *Lassiter*^[8] and *Santosky*^[9] decisions, recognizing that parental termination decrees are among the most severe forms of state action, have not served as precedent in other areas. We are therefore satisfied that the label “civil” should not entice us to leave undisturbed the Mississippi courts' disposition of this case. [[Id.](#) at 127–128, 117 S.Ct. 555 (quotation marks and citations omitted).]

In *MLB*, the Court emphasized that proceedings to terminate a parent's relationship with a child implicate rights “of basic importance in our society” and “demand[] the close consideration the Court has long required when a family association so undeniably *124 important is at stake.”

[Id.](#) at 116–117, 117 S.Ct. 555 (quotation marks and citation omitted). Quoting *Santosky*, the Court highlighted that “[f]ew forms of state action ... are both so severe

and so irreversible.” [Id.](#) at 118, 117 S.Ct. 555. The Court acknowledged that its precedents concerning access to judicial proceedings draw on both equal protection and due process principles, elucidating that “in the Court's *Griffin*-line cases, “[d]ue process and equal protection principles converge.” [Id.](#) at 120, 117 S.Ct. 555 (citation omitted; alteration in original). The Court located *MLB* “ within the framework established by our past decisions in this area.” *Id.* Without identifying the “framework” by name, the Court proceeded to employ the three-part procedural due process analysis formally introduced in *Eldridge*.

**885 In [Eldridge](#), 424 U.S. at 323–324, 96 S.Ct. 893, the Supreme Court considered whether a state agency may terminate a recipient's social security disability benefits without affording the recipient the opportunity for an evidentiary hearing. The Court painstakingly described the “elaborate” web of procedures that precedes a final decision terminating disability benefits. [Id.](#) at 337–339, 96 S.Ct. 893. It then analyzed the constitutional adequacy of those procedures according to a three-factor balancing framework:

[I]dentification of the specific dictates of due process generally requires consideration of three distinct factors: First, the private interest that will be affected by the official action; second, the risk of an erroneous deprivation of such interest through the procedures used, and the probable value, if any, of additional or substitute procedural safeguards; and finally, the Government's interest, including the function involved and the fiscal and administrative burdens that the additional or substitute procedural requirement would entail. [[Id.](#) at 335, 96 S.Ct. 893.]

*125 *Eldridge* concluded that the Due Process Clause did not mandate a hearing prior to the initial termination of a claimant's benefits. [Id.](#) at 349, 96 S.Ct. 893. In large measure, the Supreme Court rested its decision on “the fairness and reliability of the existing predetermination

procedures,” which entailed a low risk of error. [Id.](#) at 343–345, 96 S.Ct. 893.

The Court reached a different result when it applied the *Eldridge* framework in *MLB*. Weighing the interests of the petitioner-parent (“forced dissolution of her parental rights”) against “[t]he State’s pocketbook interest in advance payment for a transcript,” [MLB](#), 519 U.S. at 121, 117 S.Ct. 555, the Court found the latter interest less compelling. The Court turned to the “risk of error” attending Mississippi’s appeal procedures and observed that the Chancellor’s opinion terminating *MLB*’s rights consisted merely of statutory language and described no evidence or reasons for the Chancellor’s findings. [Id.](#) at 108, 117 S.Ct. 555. “Only a transcript can reveal to judicial minds other than the Chancellor’s the sufficiency, or insufficiency, of the evidence to support his stern judgment.” [Id.](#) at 121–122, 117 S.Ct. 555. The fiscal obligation imposed by a transcript requirement did not tilt the scale in the Court’s view, as in parental termination cases “appeals are few, and not likely to impose an undue burden on the State.” [Id.](#) at 122, 117 S.Ct. 555. “In accord with the substance and sense of our decisions in *Lassiter* and *Santosky*,” the Court concluded, “we place decrees forever terminating parental rights in the category of cases in which the State may not ‘bolt the door to equal justice.’ ” [Id.](#) at 124, 117 S.Ct. 555 (citations omitted).

Our Supreme Court recently employed *Eldridge* to strike down the one-parent doctrine, which permitted courts to obtain jurisdiction over a child and proceed to disposition with respect to both parents based on an *126 adjudication of only one. [In re Sanders](#), 495 Mich. 394, 408, 852 N.W.2d 524 (2014). The Court described that “[i]n essence, the *Eldridge* test balances the costs of certain procedural safeguards ... against the risks of not adopting such procedures.” [Id.](#) at 411, 852 N.W.2d 524. Tracking the *Eldridge* guideposts, the Supreme Court first considered “the private interest at stake here—a parent’s fundamental right to direct the care, custody, and control of his or her child free from governmental interference [, which] cannot be overstated.” [Id.](#) at 415, 852 N.W.2d 524. As to the second and third *Eldridge* factors, the Court continued:

****886** [I]t is undisputed that the state has a legitimate and important interest in protecting the health and safety of minors and, in some circumstances, that the interest will

require temporarily placing a child with a nonparent. It is this interest that lies at the heart of the state’s *parens patriae* power. But this interest runs parallel with the state’s interest in maintaining the integrity of the family unit whenever possible. [MCL 712A.1\(3\)](#) (“This chapter shall be liberally construed so that each juvenile coming within the court’s jurisdiction receives the care, guidance, and control, *preferably in his or her own home*, conducive to the juvenile’s welfare and the best interest of the state.”) (emphasis added)... When a child is parented by a fit parent, the state’s interest in the child’s welfare is perfectly aligned with the parent’s liberty interest. But when a father or mother is erroneously deprived of his or her fundamental right to parent a child, the state’s interest is undermined as well: “[T]he State registers no gain towards its declared goals when it separates children from the custody of fit parents.” In other words, the state ordinarily has an equally strong interest in ensuring that a parent’s fitness, or lack thereof, is resolved before the state interferes with the parent-child relationship. Thus, the probable value of extending the right to an adjudication to each parent in a child protective proceeding benefits both public and private interests alike. [[Id.](#) at 415–417, 852 N.W.2d 524 (citations omitted; second alteration in original).]

*127 Although the Court found that an adjudication of each parent would “increase the burden on the state in many cases,” the Court held that this process was nevertheless indispensable, as “an adjudication would significantly reduce any risk of a parent’s erroneous deprivation of the parent’s right to parent his or her children.” [Id.](#) at 417, 852 N.W.2d 524. Guided by the *Eldridge* factors, the Court concluded that the burden of extending the right to an adjudication to all parents did not outweigh the risk that a parent could be deprived of his or her child’s custody absent a finding of unfitness. [Id.](#) at 418–419, 852 N.W.2d 524.¹⁰

One additional *Eldridge* case informs our decision. Although the case arises from the criminal law, we find its teachings valuable and relevant here.

In [Ake v. Oklahoma](#), 470 U.S. 68, 77, 105 S.Ct. 1087, 84 L.Ed.2d 53 (1985), the United States Supreme Court declared, “a criminal trial is fundamentally unfair if the State proceeds against an indigent defendant without making certain that he has access to the raw materials integral to the building of an effective defense.” The Court grounded this pronouncement

in the Due Process Clause, which guarantees that an indigent defendant facing the judicial power of the State must have “a fair opportunity to present his defense.” [Id.](#) at 76, 105 S.Ct. 1087. While this principle does not require a state to “purchase for the indigent defendant all the assistance that his wealthier counterpart might buy,” it does obligate the state to provide the defendant with the “ ‘basic tools of an adequate defense[.]’ ” [Id.](#) at 77, 105 S.Ct. 1087, quoting [Britt v. North Carolina](#), 404 U.S. 226, 227, 92 S.Ct. 431, 30 L.Ed.2d 400 (1971).

*128 In *Ake*, the “basic tool” was the assistance of a consulting psychiatrist. The United States Supreme Court framed the issue presented in that case as “whether, **887 and under what conditions, the participation of a psychiatrist is important enough to preparation of a defense to require the State to provide an indigent defendant with access to competent psychiatric assistance in preparing the defense.” [Ake](#), 470 U.S. at 77, 105 S.Ct. 1087.¹¹ The Court analyzed this question by weighing the three guideposts for determining the process due in a particular case set forth in *Eldridge*.

The Supreme Court observed in *Ake*, “the interest of the individual in the outcome of the State's effort to overcome the presumption of innocence is obvious and weighs heavily in our analysis.” [Id.](#) at 78, 105 S.Ct. 1087. The State's interest is solely economic: husbanding the public fisc. This is so because “[t]he State's interest in prevailing at trial—unlike that of a private litigant—is necessarily tempered by its interest in the fair and accurate adjudication of criminal cases.” [Id.](#) at 79, 105 S.Ct. 1087. “[A] State may not legitimately assert an interest in maintenance of a strategic advantage over the defense, if the result of that advantage is to cast a pall on the accuracy of the verdict obtained.” *Id.* The Supreme Court determined in *Ake* that the first two *Eldridge* criteria weighed heavily in the defendant's favor: “We therefore conclude that the governmental interest in denying *Ake* the assistance of a psychiatrist is not substantial, in *129 light of the compelling interest of both the State and the individual in accurate dispositions.” *Id.*

The last *Eldridge* component examines “the probable value of the additional or substitute procedural safeguards that are sought, and the risk of an erroneous deprivation of the affected interest if those safeguards are not provided.” [Id.](#) at 77, 105 S.Ct. 1087. In *Ake*, the Supreme Court's evaluation of

this factor centered on the critical role played by a psychiatric expert in a trial involving a defendant's mental condition. The Court elucidated:

[T]he assistance of a psychiatrist may well be crucial to the defendant's ability to marshal his defense. In this role, psychiatrists gather facts, through professional examination, interviews, and elsewhere, that they will share with the judge or jury; they analyze the information gathered and from it draw plausible conclusions about the defendant's mental condition, and about the effects of any disorder on behavior; and they offer opinions about how the defendant's mental condition might have affected his behavior at the time in question. They know the probative questions to ask of the opposing party's psychiatrists and how to interpret their answers. Unlike lay witnesses, who can merely describe symptoms they believe might be relevant to the defendant's mental state, psychiatrists can identify the “elusive and often deceptive” symptoms of insanity and tell the jury why their observations are relevant. Further, where permitted by evidentiary rules, psychiatrists can translate a medical diagnosis into language that will assist the trier of fact, and therefore offer evidence in a form that has meaning for the task at hand. Through this process of investigation, interpretation, and testimony, psychiatrists ideally assist lay jurors, who generally **888 have no training in psychiatric matters, to make a sensible and educated determination about the mental condition of the defendant at the time of the offense. [[Id.](#) at 80–81, 105 S.Ct. 1087 (citation omitted).]

*130 The Court's meticulous depiction of the function of a psychiatrist appointed to aid the defense in an insanity case bears special significance here. The medical assistance respondents sought parallels that described by the Supreme Court in *Ake*. Just as a “psychiatrist[] can translate a medical diagnosis into language that will assist the trier of fact,” a radiologist can decode black and white images on a scan, or analyze tests that have been performed to determine whether the results were normal or abnormal, or if additional medical studies would have provided critical diagnostic information.

[4] We are not the first appellate court to look to *Ake* for guidance in a case involving the termination of parental rights. See *State ex rel. Children Youth & Families Dep't. v. Kathleen D.C.*, 141 N.M. 535, 540, 157 P.3d 714 (2007) (“[I]n certain circumstances, due process may require the appointment of an expert witness at the State's expense to an indigent parent in a neglect and abuse proceeding.”); *In re Shaeffer Children*, 85 Ohio App.3d 683, 691, 621 N.E.2d 426 (1993) (applying *Eldridge* and *Ake* in holding that due process required the appointment of a psychiatric expert to assist the mother “in the preparation of her defense”). And *Ake* counsels that fulfillment of a respondent's due process rights may sometimes require state-funded access to an expert to assist in the evaluation, preparation, and presentation of a defense.

IV

In this case, petitioner and the children's guardian ad litem assert that the trial court's decision fell within the range of principled outcomes, as respondents failed to identify an actual expert who would likely benefit the defense, and offered only an “amorphous” request rather than a “well-reasoned argument” in support of *131 their motion for funding an expert witness or consultant. The chief judge reached a similar conclusion in denying respondents' motion. We reject these arguments. Respondents plainly demonstrated that petitioner's case rested exclusively on expert medical testimony involving complex, controversial medical issues, and that respondents' counsel lacked the tools necessary to challenge petitioner's experts. Child abuse science was not collateral or unimportant to these proceedings; expert testimony formed the whole of petitioner's proofs. The record amply supports that petitioner's case rose or fell on the trial court's assessment of the science advocated by petitioner, as no other evidence suggested that respondents had deliberately harmed their son. Without physician-witnesses to translate the medical records and to express expert conclusions, petitioner

would have lacked *any* evidence to seek termination of respondents' parental rights. This fact supplied the requisite nexus between respondents' request and the issues presented, and established a reasonable probability that an expert would be of meaningful assistance.

Nor are we persuaded by the two cases cited by the chief judge as authority for denying respondents' motion, *Tanner*, 469 Mich. 437, 671 N.W.2d 728, and *Leonard*, 224 Mich.App. 569, 569 N.W.2d 663. *Tanner* concerned the construction of MCL 775.15, a statute that applies only in criminal cases. We discuss *Tanner* only to explain why it lacks relevance even by way of analogy.

The defendant in *Tanner* sought expert assistance with DNA evidence that actually **889 excluded the defendant as the perpetrator of the crime. *Tanner*, 469 Mich. at 440, 671 N.W.2d 728. Although serological testing of other samples tended to inculpate the defendant, her counsel did not seek to have the blood retested so that the serology *132 results could be confirmed. *Id.* at 441, 671 N.W.2d 728. In the trial court, counsel argued that “he wanted an expert to help him better understand the DNA evidence and possibly to testify at trial.” *Id.* The trial court denied the request, and the Supreme Court held that the trial court had not abused its discretion. Because the DNA evidence was exculpatory, the defendant failed to show “that she could not safely proceed to trial” without the assistance of a DNA expert. *Id.* at 444, 671 N.W.2d 728. Although the serology evidence linked the defendant to the crime, the Supreme Court determined that the defendant “did not establish that an expert serologist would offer testimony that would ‘likely benefit the defense,’ ” as required by MCL 775.15. *Id.* at 443–444, 671 N.W.2d 728.

Here, respondents amply established that expert consultation was necessary to their defense and would likely benefit them. The medical records confirmed the existence of a profoundly important contradiction. On one hand, St. John physicians determined that JPY's MRI and CT scan showed no evidence of trauma or any other abnormality. On the other hand, the Children's Hospital medical experts determined that the same films demonstrated powerful evidence of abuse. Respondents' counsel were incapable of resolving or understanding this critical evidentiary inconsistency without expert assistance.

While we agree that counsel should strive to read and understand medical records and to conduct independent

medical research, it is simply unrealistic to expect that such concerted study will yield the expertise necessary to interpret MRIs or [CT scans](#), or to effectively cross-examine an adversary expert witness steeped in years of medical training, knowledge, and experience. Absent expert assistance, respondents' lawyers could not capably question or undermine the *133 [brain-imaging](#) evidence, which formed an essential part of petitioner's case.¹² Nor could respondents put forth any alternative theories regarding the cause of JPY's [retinal hemorrhages](#), such as prolonged [hypoxia](#) followed by resuscitation and ventilation.¹³ Realistically, without expert assistance, respondents' counsel had no serviceable tools to assist them in fairly evaluating the strengths and weaknesses of petitioner's medical evidence, or in advancing a different hypothesis.

Nor do we find that the trial court properly relied on *Leonard*. This Court concluded in *Leonard* that the defendant's lack of a DNA expert at trial did not deprive him of due process of law. [Leonard](#), 224 Mich.App. at 583, 569 N.W.2d 663. We further noted that defense counsel neglected to file a formal motion seeking an expert witness, and “did not indicate that he required expert assistance to cross-examine the prosecution's experts.” [Id.](#) at 585, 569 N.W.2d 663. These facts fully distinguish *Leonard* from the case at hand. **890 Moreover, a federal district court ultimately granted *Leonard*'s petition seeking a writ of habeas corpus, finding that “[d]efense counsel's overall ignorance of DNA analysis and lack of preparedness rendered his assistance” constitutionally ineffective. [Leonard v. Michigan](#), 256 F.Supp.2d 723, 728 (W.D.Mich., 2003). The prosecution did not appeal that ruling to the Sixth Circuit Court of Appeals. Thus, *Leonard* *134 provides petitioner with no support for its contention that the chief judge appropriately denied respondents' requests for funding.

v

[5] [6] Respondent-mother's motion for “the appointment of an expert witness” cited no specific statute or court rule, but relied instead on “the interests of fairness.” Respondent-father premises his argument in this Court on due process principles. We acknowledge the dearth of published decisions in the child welfare arena regarding the standards a court should apply when considering a request for expert witness funding. At their core, respondents' requests for funding relate

to “the essential fairness of the state-ordered proceedings....” [MLB](#), 519 U.S. at 120, 117 S.Ct. 555. Accordingly, we follow the lead of the United States and Michigan Supreme Courts and situate our legal analysis within the *Eldridge* framework. In deciding whether the chief judge abused his discretion by denying respondents' funding requests, we examine the private and governmental interests at stake, the extent to which the procedures otherwise available to respondents served their interests, and the burden on the state of providing expert funding. [Eldridge](#), 424 U.S. at 335, 96 S.Ct. 893.

We need spend little time on *Eldridge*'s first rung: the private interests at stake. For respondents, their “interest in the accuracy and justice” of a decision terminating their rights to their children is “a commanding one.” [Lassiter](#), 452 U.S. at 27, 101 S.Ct. 2153. As emphasized in [Sanders](#), 495 Mich. at 415, 852 N.W.2d 524, the importance of the fundamental rights at risk in a termination proceeding “cannot be overstated.” Petitioner, too, has a compelling interest in the safety and welfare of children. Importantly, this “*parens patriae* interest favors preservation, *135 not severance, of natural familial bonds.” [Santosky](#), 455 U.S. at 766–767, 102 S.Ct. 1388. Alternatively stated, “[s]ince the State has an urgent interest in the welfare of the child, it shares the parent's interest in an accurate and just decision.” [Lassiter](#), 452 U.S. at 27, 101 S.Ct. 2153. Petitioner's interest in prevailing at a trial must yield to its interest in a fair proceeding that protects a parent's constitutional rights.

In this case, the private interests strongly favored funding for an expert witness or consultant. As we have stated, the medical evidence conflicted concerning whether JPY sustained [trauma to his brain](#) before his respiratory arrest. The science swirling around cases involving “[shaken baby syndrome](#)” and other forms of child abuse is “highly contested.” [People v. Ackley](#), 497 Mich. 381, 394, 870 N.W.2d 858 (2015). Dr. Giles's opinion that JPY's retinal and [subdural hemorrhages](#) could manifest only as a result of child abuse has been vigorously challenged by scientists worldwide and in courtrooms throughout this country. See Findley et al., *Shaken Baby Syndrome, Abusive Head Trauma, and Actual Innocence: Getting It Right*, 12 Hous J Health L & Policy 209 (2012). As the Findley article discusses in detail, many of the conventional assumptions underlying medical opinions that a parent abused a child have proven fundamentally

flawed. Recent scientific studies and careful reviews of older studies have called into question the reliability of certain findings, **891 including subdural and [retinal hemorrhages](#), in confirming child abuse. Indeed, even skeletal findings thought to confirm abuse also may be accurately explained by “accidental trauma, [metabolic bone disease](#) and/or nutritional deficiencies.” *Id.* at 255. ¹⁴ Getting it right, medically and *136 scientifically, protects the shared interests of petitioner and respondents. Handicapping one side's ability to present relevant evidence hampers, rather than enhances, the search for truth.

Next, we consider whether the nature of the child welfare proceedings adequately safeguarded respondents' interests, absent funding for an independent expert. This inquiry requires us to focus on the due process safeguards incorporated into child protective proceedings. In *Eldridge*, the Supreme Court determined that the procedures governing administrative claims challenging the termination of disability benefits provided “effective process” for asserting a claim, and “also assure[d] a right to an evidentiary hearing, as well as to subsequent judicial review,” before the denial of a claim became final.  [Eldridge](#), 424 U.S. at 349, 96 S.Ct. 893. The interconnected web of state and federal procedures required to terminate social security disability benefits sufficed for due process purposes.

In contrast, a termination of parental rights proceeding is fundamentally adversarial and lacks the “checks and balances” built into the disability benefit process. Thus, when only one side possesses the funds necessary to pay an expert witness, the opposing side must rely on cross-examination to attack the expert's testimony. In a case involving highly technical matters which few laypeople readily understand, the task of cross-examination without expert consultation presents a steep uphill climb. Lacking an expert's guidance, respondents' counsel could not interpret the [CT scan](#) or the MRI, or understand whether additional specific laboratory tests should have been ordered or likely would have supplied pertinent clinical information. Furthermore, even when counsel confronted several of the Children's Hospital witnesses with potential *137 evidentiary contradictions or the existence of other theories regarding child abuse science, counsel were stuck with the answers they elicited. Counsel had no evidence to offer in rebuttal or to employ in establishing a testimonial weakness. We are unconvinced that the availability of cross-examination, uninformed by expert consultation, adequately reduces the risk of error in

a termination proceeding engulfed in scientific and medical evidence, as was this one.

Lastly, we look to the government's interest, including the fiscal and administrative burdens that payment for an expert would impose. Here, mother's counsel estimated that respondents needed “up to \$2,500” to secure expert consultation. While this sum is not insubstantial, it hardly qualifies as unreasonable. We are unconvinced that the burden of a payment in this range should have outweighed the interests of these indigent parents, who otherwise lacked the financial resources to retain expert medical consultation.

[7] In sum, after weighing the respective private and public interests, we hold that the chief judge abused his discretion by failing to employ the requisite due process analysis under *Eldridge*, and by refusing to authorize reasonable expert witness funding in this case. We highlight the inherently fact-specific inquiry required by **892 the *Eldridge* due process framework: “due process is flexible and calls for such procedural protections as the particular situation demands.”  [Eldridge](#), 424 U.S. at 334, 96 S.Ct. 893 (quotation marks, citation, and alteration omitted). Under the circumstances presented here, no meaningful alternative evidentiary safeguards afforded respondents an opportunity to challenge petitioner's child abuse theory, despite that the St. John evidence clearly called the reliability of that *138 evidence into question. This abridgment of respondents' due process rights requires a new termination hearing, should respondents elect to request one after they have been afforded a reasonable fee for expert consultation.

We vacate the order terminating respondents' parental rights and remand for proceedings consistent with this opinion. We do not retain jurisdiction.

CAVANAGH, J., concurred with GLEICHER, J.

JANSEN, P.J. (concurring).

I concur in the majority opinion. I write separately to emphasize that the holding in this case is inherently fact-specific and does not require authorization of expert witness funding in every termination case involving allegations of abuse or neglect or in every case in which the respondent cannot afford to consult with an expert witness. Expert witness funding is necessary in this case because there are two conflicting theories regarding the cause of JPY's injuries. The St. John Hospital testing revealed no evidence of [injury](#)

to the brain, while the Children's Hospital interpretation of the same data revealed severe injuries and abnormalities indicative of abuse. As noted by the majority, the medical records indicated a “profoundly important contradiction,” and respondents' attorneys could not resolve or understand the contradiction without expert assistance.

However, the reasoning in this case does not extend to all termination cases in which the petitioner alleges abuse or neglect, or in which the respondent cannot afford to consult an expert witness. Instead, in each case in which a respondent requests expert witness funding, the chief judge must employ

the *Eldridge* due-process test to determine whether to authorize reasonable *139 expert witness funding based on the facts of the case at hand. See [Mathews v. Eldridge](#), 424 U.S. 319, 334, 96 S.Ct. 893, 47 L.Ed.2d 18 (1976) (“[D]ue process is flexible and calls for such procedural protections as the particular situation demands.”) (emphasis added). I respectfully concur.

Footnotes

- 1 The St. John records do not explain why the child was at risk for “breathing issues.” Mother attempted to answer questions on this subject at the termination hearing, but the trial court ruled that “the second [someone] open[s] their mouth” and makes an out-of-court statement, “it would be hearsay” and inadmissible. The trial court's misperception of the hearsay rule permeated the trial; the court ruled virtually every out-of-court statement offered in evidence as automatically and incontrovertibly inadmissible. Of course, an out-of-court statement offered for a purpose other than proving the truth of the matter asserted is not automatically hearsay. [MRE 801\(c\)](#). Further, multiple exceptions to the hearsay rule permit the admission of certain out-of-court statements. See [MRE 803](#) and [MRE 804](#).
- 2 The parents did not reside in the same home. Father worked during the day and would visit and care for the children in the evening, when mother worked.
- 3 A blood test at St. John later proved positive for parainfluenza virus type 3.
- 4 The Department of Human Services was the original petitioner. That department has since been reconfigured as the Department of Health and Human Services.
- 5 The last page or two of the brief accompanying mother's motion is missing from the court record.
- 6 As a pediatric neurologist, Dr. Ruprecht testified that she regularly reviewed and interpreted brain imaging studies despite that she is not a radiologist. The trial court ruled that because Dr. Ruprecht was not an expert in radiology, she was unqualified to testify regarding the MRI findings.
- 7 [MRE 706](#) is the equivalent of [FRE 706](#). [FRE 706](#) permits a trial court to appoint its own expert, particularly when the parties' retained experts “are in such wild disagreement that the trial court might find it helpful and in furtherance of the search for truth to appoint an independent expert.” Saltzburg, Martin, & Capra, 3 Federal Rules of Evidence Manual (10th ed), § 706.02[1], p. 706–3. “Quite simply, ‘litigant assistance’ is not the purpose of [Rule 706](#).” [Carranza v. Fraas](#), 471 F.Supp.2d 8, 11 (D.D.C., 2007).
- 8 In [Lassiter](#), 452 U.S. 18, 101 S.Ct. 2153, the Supreme Court analyzed whether the indigent respondent was unconstitutionally denied appointed counsel in a proceeding that terminated her parental rights. The Court's due process determination rested on its application of the factors set forth in *Mathews v. Eldridge* to the particular facts of that case.
- 9 In [Santosky](#), 455 U.S. at 758, 102 S.Ct. 1388, the Supreme Court again applied the *Eldridge* factors in a termination of parental rights case, concluding: “Evaluation of the three *Eldridge* factors compels the conclusion that use of a ‘fair preponderance of the evidence’ standard in such proceedings is inconsistent with due process.”
- 10 *Sanders* was not the first Michigan child protective case to employ *Eldridge*. See [In re Rood](#), 483 Mich. 73, 92, 763 N.W.2d 587 (2009) (opinion by CORRIGAN, J.).
- 11 A number of courts have applied *Ake*'s reasoning to a defendant's requests for expert assistance in areas other than psychiatry. For a list and summary of the cases, see Giannelli, *Ake v. Oklahoma: The Right to Expert Assistance in a Post-Daubert, Post-DNA World*, 89 Cornell L Rev 1305, 1367–1368 (2004), and [Moore v. State](#), 390 Md. 343, 364, 889 A.2d 325 (2005) (“The majority of courts have concluded that *Ake* extends beyond psychiatric experts.”).
- 12 It is similarly unrealistic to expect counsel to have found an expert willing to review the imaging studies and the voluminous medical records in this case for free, on the “if come” that a court might someday agree to some funding. Such

medical volunteers likely are exceedingly rare. We also reject the notion that counsel could and should have presciently ascertained a potential expert's opinions without consulting with an expert.

13 See Squier, *The "Shaken Baby" Syndrome: Pathology and Mechanisms*, 122 Acta Neuropathol 519, 530 (2011).

14 During cross-examination, one of the prosecution's experts (Dr. Mary Lou Angelilli) conceded that no tests were performed to determine whether there were metabolic causes for JPY's fractures.
